

ANDE LAKSHMI SATWIKA

Software Engineer | Full-Stack Development | Applied AI/ML | Bengaluru, Karnataka | 8639133564
lakshmisatwika28@gmail.com | [Github](#) | [Linkedin](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Third-year B.Tech student building full-stack applications and applied AI/ML systems end to end. Hands-on experience with Python, JavaScript, React, FastAPI, relational and NoSQL databases, computer vision, and generative AI. Strong project record spanning model development, dataset preparation, backend APIs, and user-facing application workflows.

EDUCATION

Indian Institute of Information Technology, Kottayam — Currently 3rd Year B.Tech
CGPA: 8.48

TECHNICAL SKILLS

- Languages: Python, JavaScript, C, C++
- Web & Backend: HTML, CSS, React, FastAPI, REST APIs, Flask, UI/UX
- Databases: MySQL, MongoDB
- AI / ML: Machine Learning, Deep Learning, Neural Networks, Computer Vision, Generative AI, Data Science, YOLO, Resnet50, AutoAI
- Tools: Git, GitHub, VS Code, MATLAB, OpenMP (Parallel Computing)
- IBM: IBM AutoAI, IBM Watson Machine Learning, IBM watsonx.ai, IBM watsonx, IBM Orchestrate, IBM Cloud

EXPERIENCE

EDUNET FOUNDATION — *Generative Artificial Intelligence & Cloud Computing Intern*
Remote | Jun 2026 – Sep 2026

- Developed **BreastCare AI**, a machine-learning web application for breast cancer risk classification using **IBM AutoAI, IBM Watson Machine Learning, Python, and Flask**.
- Built an end-to-end prediction workflow integrating the trained ML model with a **Flask web application and IBM Watson Machine Learning REST API** for online predictions.
- Developed an interactive interface with **prediction history, feature visualization, and responsive UI** for presenting model outputs.
- Gained hands-on experience with **Generative AI, Machine Learning, IBM Cloud, IBM watsonx.ai, IBM watsonx, and IBM Orchestrate** through practical AI application development.

Project: BreastCare AI | **GitHub:** github.com/lakshmisatwika28-lang/Breast-Cancer-Prediction-AutoAI

INAMIGOS FOUNDATION (IAF) — *AI Web Developer Intern*
Remote | May 2026 – Jun 2026

- Developed and enhanced **responsive web pages** using AI-assisted development tools and modern web technologies.
- Applied **UI/UX principles** to improve website usability, visual design, responsiveness, and user engagement.
- Implemented and refined **frontend components** using HTML and web development technologies based on project requirements.
- Leveraged **AI-assisted development workflows** to accelerate implementation, debugging, and refinement of web interfaces.

SELECTED PROJECTS

NeuroVision — AI-Powered Brain Tumour Analysis | Python | YOLO26 | Computer Vision

- Built and trained a YOLO26-based computer-vision model along with Resnet50 and Custom Neural Network for brain-MRI tumor detection and classification, reaching approximately 0.845 mAP@50 and 0.602 mAP@50–95 on validation data.
- Created and audited a labeled MRI dataset with train, validation, and test splits, then ran systematic training and evaluation to assess model performance.
- Developed tumor-region extraction functionality and integrated the model into an AI-powered application with frontend and backend components.

GitHub Repo: [Neurovision](#)

SereneSpaces — Real Estate Management System | SQL | DBMS | Database Design

- Developed a real estate management system to manage agents, properties, customers, and payment transactions using relational database concepts.
- Designed and implemented SQL-based data management with structured relationships to maintain data integrity and support efficient property and transaction handling.
- Built a user interface for property browsing and transaction management, connecting application functionality with the underlying database system.

GitHub Repo: [SereneSpaces](#)

HEALTECH — AI-Assisted Healthcare Application | React | FastAPI | MySQL

- Developing a full-stack healthcare application featuring symptom/disease search, nearby hospital discovery, emergency SOS, emergency contacts, and ambulance workflows.
- Implementing location-based emergency workflows that identify nearby hospitals and manage emergency status, ambulance assignment, ETA, and distance tracking.
- Integrating the React/Vite frontend with FastAPI backend services and MySQL for application data and emergency-management functionality.

Status: *In Progress*
